

I would like to say that I have enjoyed the ability of have a radio signal where ever I go to keep me informed and up top date on local weather and traffic. I do pay for this information and associated services and will continue to pay for it.

I drive a truck and trying to find local AM/FM radio staions while driving is not only unsafe but very frustrating not knowing the area or information regarding where to find what I need. XM or satellite radio is very easy and safe to operate, just find the city in which you need information and enter the station.

Please consider the safety factor on this issue since we, as truck drivers don't always know the cities we are in, need to keep informed as rapidly as possible and satellite radio is the best way to do this. I can only speak for XM as that is my choice of service.

Thank you very much,
